Data Management Plan (DMP)

Intellectual property rights

Who will be the owner of the data produced?

How to guarantee property rights?

How will data be used?

Implementation / Concrete actions ⇒

bloXberg

bloxberg is the blockchain from science for science

Certification

Certify your Research Data on the blockchain.

This **protects your intellectual property** and **safeguards against potential future scooping** by generating **a unique identifier from your data that is then stored on the chain**. A **certificate** is then created to **provide proof** that this information belongs to you or your organization.

Research stakeholders are then **more open to the dissemination of their data** (files, results, protocols, publications, etc.) **since** they know that, in particular, the **ownership, content** and **conditions of use of the data cannot not be altered**.

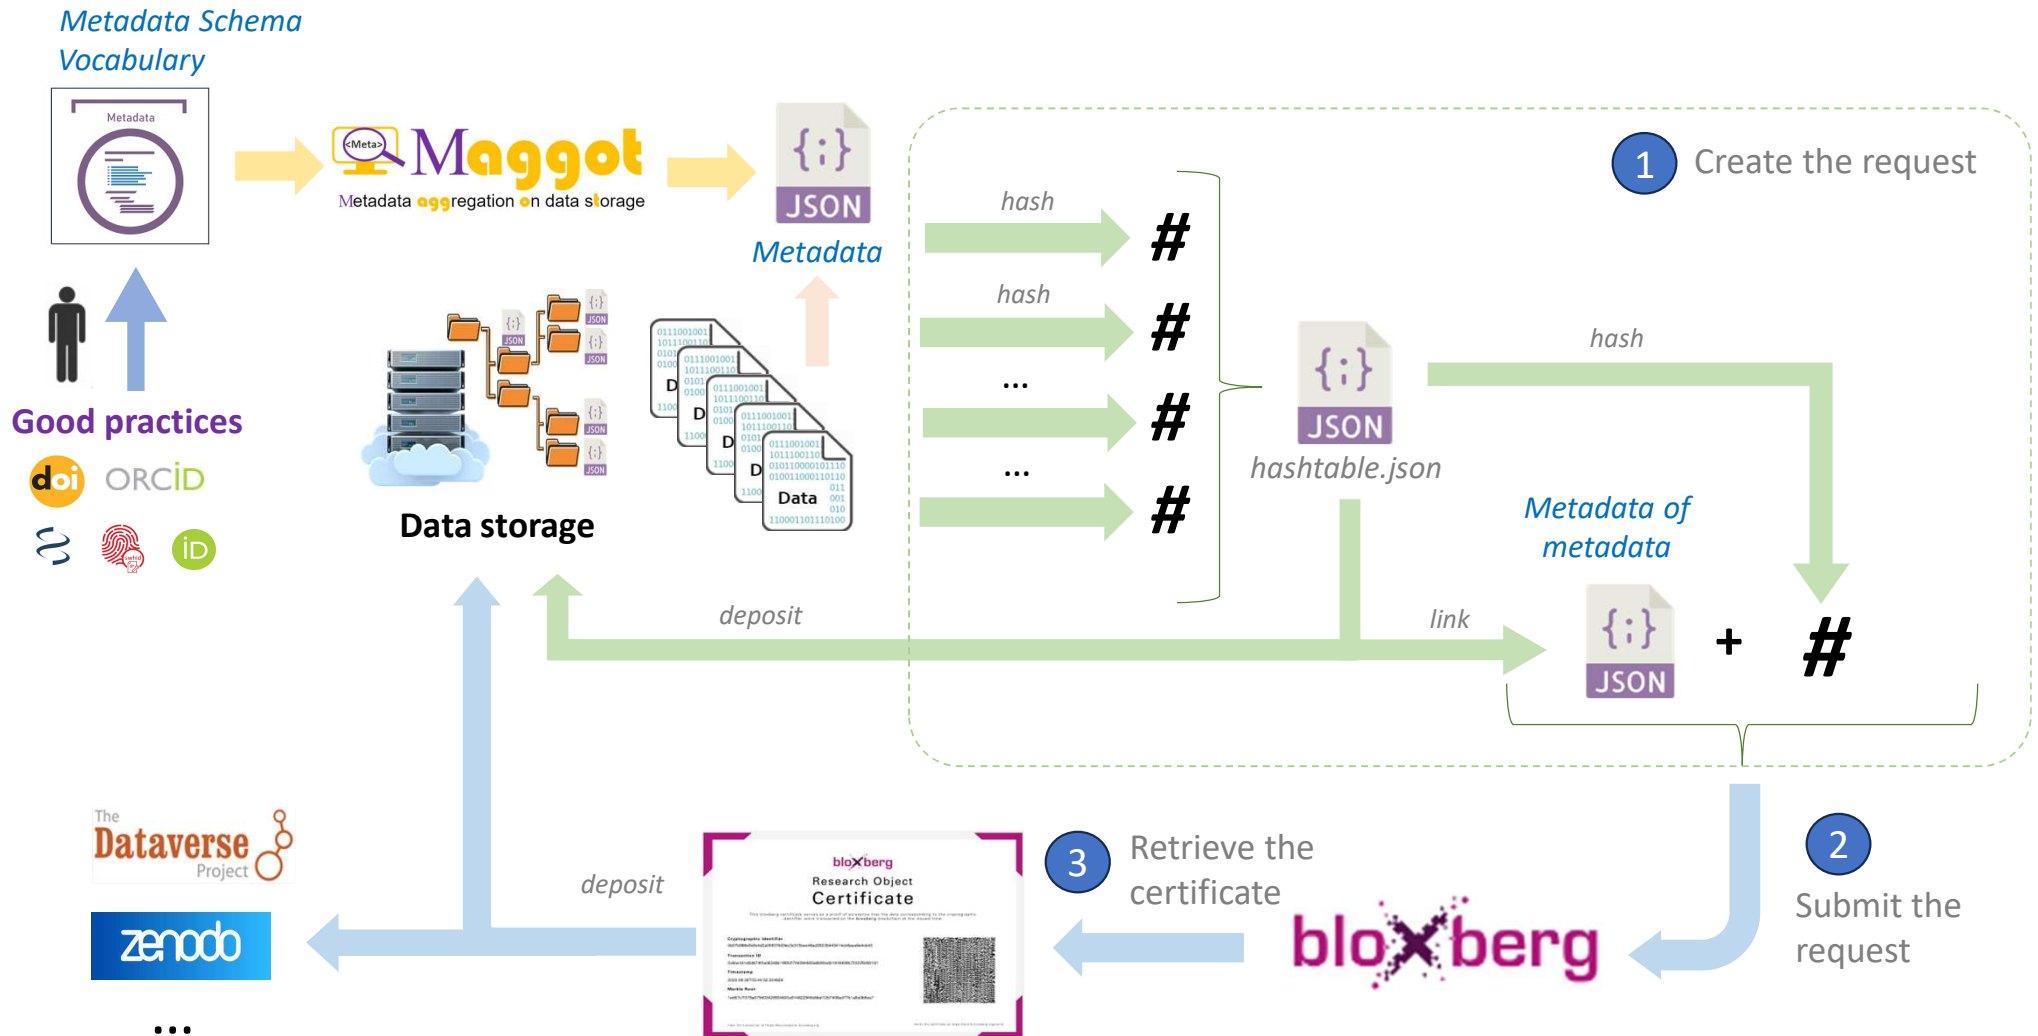

- The bloxberg Association consists of research institutions who run nodes.
- Each research organization will be restricted to running one authority node on the network.

49 nodes (November 2023)

Proof of Authority

Transactions and blocks are validated by approved accounts, known as validators.

However the process is automated and does not require validators to be constantly monitoring their computers.

https://en.wikipedia.org/wiki/Proof_of_authority
